Local Connection – NOT on UT’s Domain (UTAD)

Log-in to the computer with the following username and password:
- Username: hhsstudent
- Password: student@hhs
- Log on to: HHSWIRELESS(XX) this computer

Dial-Up Connection

If you would like to access the internet from home follow these directions:
- Log-in using the username and password above
- Using a regular phone cord, plug one end into the computer and the other end into a phone jack
- Once the computer has booted up double click the “Shortcut to Connect UT Dialup PPP” link on the desktop
- In the new window that comes up fill in the username and password with your UTAD username and password
- Click Dial. If the University of Toledo is a long distance call for you, your internet time will be considered a long distance call. If this is the case and you still want to connect to the internet you must add a “1” in the box where the dialing number is located. Do not add any other numbers.

Wireless Connection on Campus

- After logging on using the username and password above, click the “Wireless Network Connection” bubble in the bottom right corner (Figure A).
- A new window will appear. In this window enter your UTAD username, password, and “UTAD” in the spaces provided (Figure B). This authenticates you to the University network.
- Click OK and you should then be connected to UT’s Private wireless network
- OR you can use UT’s public wireless connection, if you do not have a utad account.
