

<b>Course Syllabus</b>	<b>EECS 4220 – Programmable Logic Controllers</b>
<b>Credits &amp; Contact hours</b>	3 credit hours & two 75-minute lecture contact hours.
<b>Coordinator</b>	Dr. William T. Evans
<b>Textbook</b>	Free online text at <a href="http://www.eng.utoledo.edu/~wevans">www.eng.utoledo.edu/~wevans</a>
<b>Course Information</b>	<p>An introduction to programmable logic controllers (PLCs), process control algorithms, interfacing of sensors and other I/O devices, simulation and networking.</p> <p>Prerequisite: EECS 3210</p> <p>Elective course</p>
<b>Specific Goals- Students Learning Objectives</b>	<p>The student will be able to</p> <ol style="list-style-type: none"> <li>1. Demonstrate knowledge of programmable logic controllers.</li> <li>2. Demonstrate knowledge of process control systems.</li> <li>3. Program using ladder logic programming of software.</li> <li>4. Design PLC based system for process control.</li> <li>5. Use digital and analog I/O.</li> <li>6. Understand various timers, counters, fault and interrupt systems.</li> <li>7. Define and design a PLC based process control system, its software/hardware design.</li> <li>8. Write a report and present results.</li> </ol>
<b>Topics</b>	<ol style="list-style-type: none"> <li>1. Introduction to Programmable Logic Controllers (PLCs) and its architecture.</li> <li>2. Input/output modules, power supplies, opto isolation and memory map</li> <li>3. Allen-Bradley Compact Logix Instruction Set</li> <li>4. Siemens Instruction Set</li> <li>5. Addressing considerations for both PLC processors</li> <li>6. IEC 61131-3 programming language standard</li> <li>7. Ladder logic programming including combinational logic, branching and other rung conditions</li> <li>8. Start/stop circuits, special contacts, transitional contacts, latching instructions, memory circuit constructs and S/R to Seal Circuit transfer</li> <li>9. Timers, timing diagrams and examples for timer applications</li> <li>10. Counter basic programming, Arithmetic, program control instructions</li> </ol>

11. Control Panel Construction Standards
12. Control standards external to the Control Panel
13. Analog module-programming examples, Fault and interrupt service routines
14. Sequential Programming Concepts
15. Process control PLC programming including Faceplate
16. HMI Programming Organization
17. Siemens Function/Function Blocks
18. Motion Control of single axis motion systems
