Standard Operating Procedure

All lightening protection will be visually inspected on a regular basis.

Purpose
To ensure cleanliness and tight connections.

Procedure

Annual:
1. Check all air terminals (lightening rods) that are interconnected for corrosion and rigid attachment to structure.
2. Check conductors for corrosion, strong mechanical joints and loose or broken fasteners.
3. Check for loops, sharp bends (less than 8" radius) and frayed conductors.
4. Check for damaged guards and down conductors.
5. Report any unusual conditions to the Electrical Systems Director.
