The University of Toledo

Version 4.0

Setting Up Your Multi Factor Account

Enrolling and configuring multi factor authentication begins with logging into the Multi Factor Authentication User Portal at <https://mfaportal.utoledo.edu> with your UTAD username and password.

Username

Password

Log In

If this is your first time logging into the MFA User Portal, the User Setup page will load and you will need to select an authentication method. The default method is the Mobile App method. If you would rather receive a phone call at your desk, select the Phone Call option from the Method drop down menu.

Multi Factor Authentication Methods

Mobile App Authentication (Default)

When using the Mobile App option for Multi Factor Authentication, the first step is to install the Microsoft Authenticator app for your phone from the Google Play or Apple App Store.

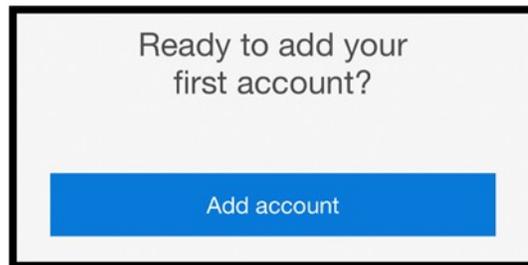

Microsoft Authenticator for Android

<https://play.google.com/store/apps/details?id=com.azure.authenticator>

Microsoft Authenticator for iOS

<https://itunes.apple.com/app/id983156458>

When the app is installed on your phone, open the Microsoft Authenticator app and click the **Add account button**. The Authenticator app will ask what type of account is being added. Select “Work or schoolaccount”.

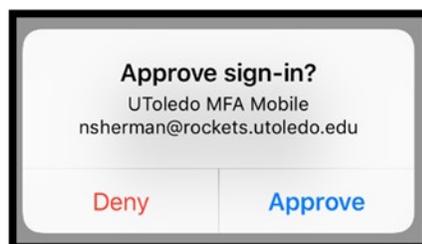

If prompted to allow Authenticator to access your phone’s camera, allow it.

The Authenticator app will allow you to scan a QR code that is generated from the MFA User Setup page. On a PC or another device, go to the MFA User Portal at <https://mfaportal.utoledo.edu>. When the User Setup page loads, click the Generate Activation Code button. A QR code and a nine-digit code will be displayed on the page similar to what is shown below:

Scan the QR code on the User Setup page or manually enter the nine-digit code displayed on the User Setup page. The UToledo MFA Mobile account will be added to your Authenticator app’s Accounts screen.

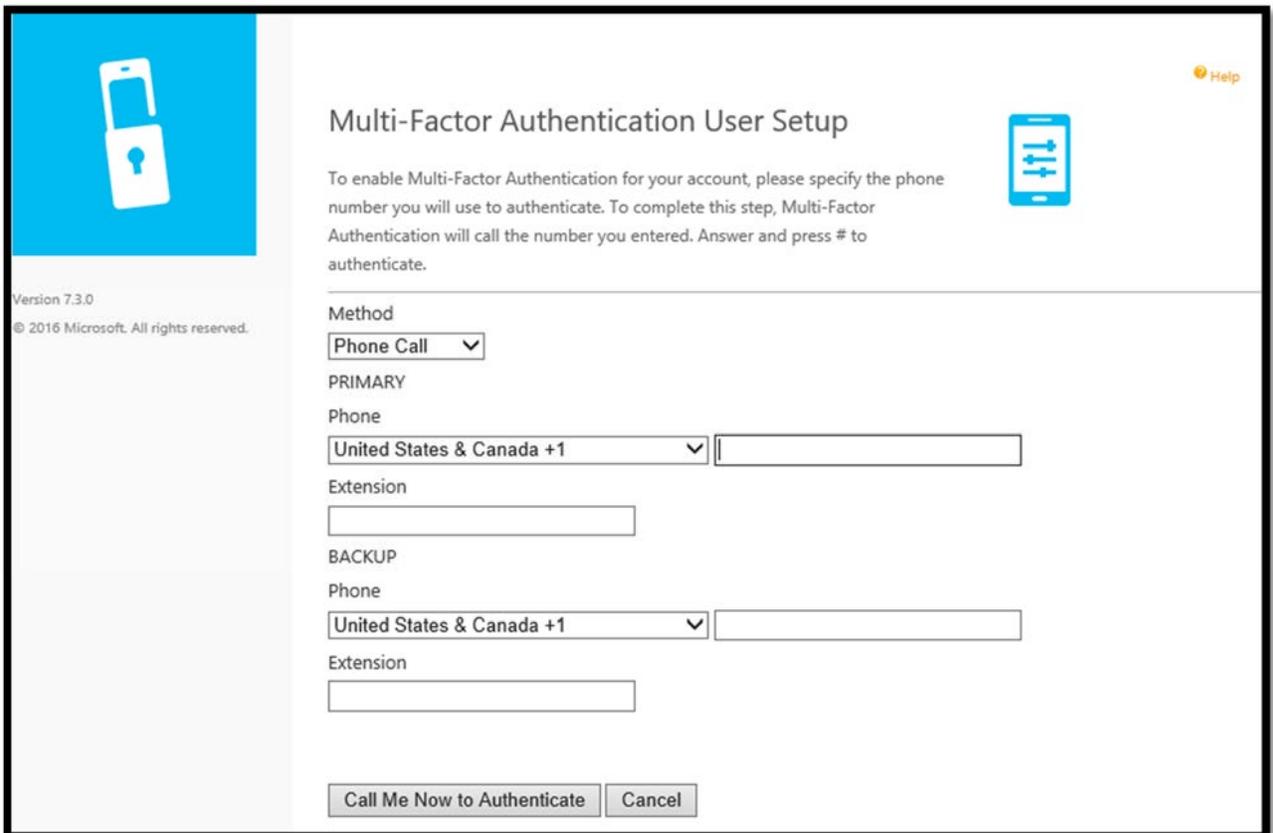

On the User Setup page, click the Authenticate Me Now button. You should receive a notification on your phone asking if you approve the sign in request. Select the Approve option.

Next, the Security Questions page will load. Select four questions and enter the answers, then click Continue. You are now ready to use Multi Factor Authentication.

Phone Call

If you would rather receive a phone call to a land line or cell phone when using Multi Factor Authentication, select the Phone Call option from the Method drop down menu. You will be asked to enter a primary and backup phone number & extension (if needed) on this screen if no phone number was available in UTAD:

The screenshot displays the 'Multi-Factor Authentication User Setup' interface. On the left, there is a blue square icon with a white smartphone and a keyhole. Below it, the text reads 'Version 7.3.0' and '© 2016 Microsoft. All rights reserved.'. On the right, there is a 'Help' link with a question mark icon. The main heading is 'Multi-Factor Authentication User Setup'. Below the heading, a paragraph explains: 'To enable Multi-Factor Authentication for your account, please specify the phone number you will use to authenticate. To complete this step, Multi-Factor Authentication will call the number you entered. Answer and press # to authenticate.' The form includes a 'Method' dropdown menu set to 'Phone Call'. Under the 'PRIMARY' section, there is a 'Phone' field with a dropdown menu set to 'United States & Canada +1' and an adjacent text input field. Below that is an 'Extension' field. The 'BACKUP' section has a similar 'Phone' field with a dropdown menu set to 'United States & Canada +1' and an adjacent text input field, followed by an 'Extension' field. At the bottom, there are two buttons: 'Call Me Now to Authenticate' and 'Cancel'.

After entering a primary and backup phone number, click the **Call Me Now** to Authenticate button. You will receive a phone call on your primary phone. Answer the call and follow the instructions to complete the authentication.

Next, the Security Questions page will load. Select four questions and enter the answers, then click continue. You are now ready to use Multi Factor Authentication.
