1. Molecular mechanisms of cardiovascular disease, with special emphasis on uremic cardiomyopathy. Use of Na/K-ATPase alpha1 heterozygous knockout mouse models as well as human blood samples to study the relationship between Na/K-ATPase content, circulating levels of CTS, and cardiovascular functions.
2. Cardiac stem/progenitor cell activation and its role in cardiac repair and regeneration
3. MicroRNA-29b (miR-29b) regulation in uremic cardiomyopathy
