

**COLLEGE OF MEDICINE
AND LIFE SCIENCES**

THE UNIVERSITY OF TOLEDO

RESEARCH OPPORTUNITY

Title:	<ul style="list-style-type: none">▪ Inflammation and Fibrosis Laboratory▪ Environmental Toxicology and Health Laboratory
Department & Division:	Department of Medicine, Division of Cardiovascular Medicine
Type of Research:	Translational Medical Science/Basic Medical Science
Location:	Health Education Building, Room 205
Website:	http://www.utoledo.edu/med/depts/medicine/cardiology/pubs/haller.html
Funding:	NIH, NOAA, NSF, State of Ohio, Philanthropy
Research Description:	The Haller laboratory investigates the pro-inflammatory and pro-fibrotic effects of the TNF-receptor superfamily costimulatory molecule CD40 in the development of cardiovascular and renal disease. In addition, our research focuses on the potentially harmful effects of cyanotoxins released from harmful algal blooms in pre-existing disease states.
Positions Available:	Name & Email
Fellow/Resident	
Medical Students	
Graduate Students	
Undergraduate Students	
Additional Notes:	The number of learners approved for this research opportunity will be determined based on the number and type of requests.
