Healthcare workers (HCWs) reduce the personal risk of infection and reduce the spread of vaccine-preventable infections by receiving appropriate vaccines. Recommendations within this policy are in accordance with the Centers for Disease Control and Prevention (CDC) guideline for Immunization of Health-Care Personnel. All vaccination policies will be consistent with state and federal laws that may occur prior to policy updates.

(B) Purpose of Policy

The purpose of this policy is to outline the immunizations required by HCWs at The University of Toledo, Health Science Campus.

(C) Scope

This policy, unless otherwise noted, applies to all HCWs of the University of Toledo Medical Center (UTMC) hospitals and clinics who come into contact with patients, including employees, medical staff, residents, fellows, students, faculty, volunteers, and contracted service providers (collectively “HCWs”).

(D) Procedure

(1) Immunizations (Appendix A- summary immunizations chart).
   (a) Hepatitis B Vaccine:
      (i) Hepatitis B vaccine (policy: Bloodborne Pathogens Exposure Control Plan) is available to all employees with occupational exposure to blood or other potentially infectious materials. The Federal Standard (OSHA 1991) defines occupational exposure as reasonably anticipated skin, eye, mucous membrane, or parenteral contact with blood or other potentially infectious materials that might result from the performance of an employee’s duties. The vaccine is available after new employee orientation and within ten days of initial work assignment. Vaccine is provided by Occupational Health.
(ii) HCWs in certain populations at high risk for chronic hepatitis B (e.g., those born in countries with high and intermediate endemicity) should be tested for HBsAg and anti-HBc/anti-HBs to determine infection status prior to vaccination.

(iii) New employees, with reasonable risk of exposure must show proof of completion of Hepatitis B vaccine series or serology showing immunity. Serologic testing of HCWs will be performed prior to administering Hepatitis B vaccine in those who state they have received prior vaccination but are unable to show proof. HCWs who have test results that indicate prior immunity will not receive the vaccine.

(iv) Employees have the option to decline Hepatitis B vaccination and will receive appropriate counseling.

(v) Post vaccination screening for immunity to Hepatitis B will be performed within 1 to 2 months after the administration of the third vaccine dose for those personnel who perform tasks involving contact with blood other body fluids and sharp medical instruments or other sharp objects.

(vi) HCWs found to have negative antibody response (defined as <10mIU/mL) after the initial Hepatitis B vaccine series will be revaccinated with a second three-dose vaccine series. If a HCW still does not respond after revaccination, they will be considered a non-responder and referred for evaluation for lack of response and counseling.

(vii) Post exposure to Hepatitis B (needlestick, percutaneous, or mucous membrane exposure to blood known or suspected to be at high risk of being HBsAg seropositive), susceptible persons will be offered Hepatitis B vaccine.

(2) Measles, Mumps and Rubella (MMR) Vaccine
(a) HCWs must have documented immunity to measles, mumps, and rubella. Documented immunity includes birth in or before 1957 (presumed natural immunity), written documentation of appropriate vaccination, or laboratory evidence of immunity.

(b) Personnel without evidence of immunity will be offered MMR vaccine during the employment process unless contraindicated.

(c) Routine serologic screening for measles, mumps, or rubella before administering MMR vaccine to personnel is not performed.

(d) MMR is the vaccine of choice. If the recipient is known to be immune to one or more of the components, monovalent or bivalent vaccine may be used.

(3) Tetanus- Diphtheria-acellular Pertussis (Tdap)Vaccine
(a) Pertussis is highly contagious. Vaccinating HCWs with Tdap will protect them against pertussis and is expected to reduce transmission to patients, other HCWs, household members, and persons in the community.

(b) HCWs who have not received Tdap previously should receive a single dose of Tdap regardless of the time since their last Td (Tetanus-diptheria) dose. Tdap is not licensed for
multiple administrations; therefore, after receipt of Tdap, HCWs should receive Td for future booster vaccination (every 10 years) against tetanus and diphtheria.

c) Pregnant women should get a dose of Tdap during every pregnancy to protect the newborn from pertussis. Infants are most at risk for severe, life-threatening complications from pertussis.

d) Pre and post vaccination testing for antibodies is not recommended.

(4) Varicella Vaccine
   a) HCWs must have documented immunity to varicella. This includes laboratory or healthcare provider confirmation of prior disease or written documentation of two varicella vaccine doses.

   b) Serological testing for varicella will be performed if there is no documentation of immunity.

   c) Susceptible personnel who do not have contraindications to immunization should be given two doses of varicella vaccine, at least 30 days apart.

   d) Post vaccination testing of personnel for antibodies to varicella will not be performed.

(5) Influenza Vaccine
   a) Influenza vaccine is required annually. Failure of compliance will result in progressive disciplinary action, up to and including termination.

      i. Please refer to Healthcare Worker Influenza Vaccination procedure 3364-109-EH-603.1.

   b) Proof of vaccination is to be documented in the flu prep website annually, prior to December 1st, unless an exemption has been granted.

   c) Employees transferring into a department on the HSC are required to be compliant prior to their start date. HSC HCWs who are on an approved leave of absence prior to December 1st are required to be in compliance with this policy prior to their first shift of work.

   d) Exemptions to influenza vaccination may be granted for documented medical contraindications or sincerely held religious beliefs. Standard criteria for medical exemption will be established based upon recommendations from the Centers for Disease Control and Prevention (CDC).

   e) Visit http://www.utoledo.edu/fluprep for information regarding the procedure for influenza vaccination/exemption and influenza preparation and activity.
