

University of Toledo - Department of Psychology - Fall 2014
PSY 6100/7100-Quantitative Methods in Psychology I
Tuesdays & Thursdays 2:00-3:15pm
University Hall Room 5150G

Professor: Kami London, Ph.D.
Office: University Hall 1880B
Office Hours: Fridays 10am-noon, by appt

Phone: 419-530-2352
Email: kamala.london@utoledo.edu

<u>Teaching Assistant</u>	<u>office</u>	<u>phone</u>	<u>email</u>	<u>office hours</u>
Monica Rohrabough	UH1900D	419-530-2338	monica.rohrabough@rockets.utoledo.edu	TR 12:30- 2

Required Texts

- Field, A. (2009) *Discovering statistics using SPSS* (3rd ed.). London: Sage. There are older versions of this around, but the new version does a lot more. Visit his website for much supplemental materials.
- Howell, D. C. (2012). *Statistical methods for psychology* (8th ed.). Belmont, CA: Cengage Wadsworth. (see me if you are interested in using an earlier edition)
- Additional required readings will be assigned in class.
- You'll need a basic calculator.

Prerequisites

Officially, there is no prerequisite for this course; however, you should have a mastery of computational concepts (including basic algebra) and at least one elementary statistics course at the undergraduate level. If you are unsure whether you have the appropriate background make sure to talk with me about appropriate placement during the first week of classes.

Course Description

This course provides a basic understanding of the statistics used most commonly by social scientists. Topics to be covered include summarizing data with graphs and numbers, generalizing from samples to a population, and determining the effect of one variable on another. We will emphasize the interpretation and application of statistics. Even students who say they have "math anxiety" can excel in this class, if they are willing to keep up with the work. This course is the first of a three course series that fulfills the research and statistics requirements. By the end of this class, you will be able to:

1. summarize and organize data,
2. select and calculate an appropriate statistic to decide whether a variable reliably affects another variable, or whether such findings are driven by chance,
3. critically evaluate research findings in scientific journals and in the media,
4. run analyses and interpret output from a statistical software program (SPSS), and
5. possess a basic understanding of statistics that can be built upon in future research design and statistics classes, as well as the foundations needed to conduct and analyze your own studies.

Course Requirements & Evaluation

Attendance. Required, but email if you have to miss due to illness, religious reasons, conference, etc. If you use facebook and things like that during lectures, I'll do what I can to get you removed from UT. Arrive on time and do not leave early.

Cheating. Don't. If you are planning on cheating see me beforehand to discuss the penalties.

Class participation. You will be expected to read the assigned chapters and/or readings before each class period. Each class session will entail some lecture and some discussion. You will be expected to show thoughtful and critical understanding of the assigned readings in your class participation. Reading the

material beforehand is essential; it will make the material in lectures easier to understand and will ensure the pace of the class can move along. I highly encourage questions, especially if aspects of the reading were confusing. Your class participation will be your opportunity not only to ask questions, but to demonstrate your understanding of the assigned reading.

Presentations and how-to handouts. You will sign up for two topics to present to the class. Presentation length will vary and will entail demonstrating to the class how to run some statistical procedure. Your presentation should be accompanied by a brief one page (in whatever format you think best facilitates learning) how-to page to hand out to the class. We should discuss your presentation before giving it, either after class or in office hours.

Homework assignments. I have found that the best way to grasp statistical concepts is to use them. After discussing each concept, I will give you a data set to play around with to get some practical experience with the concept. Your grasp of these concepts will be demonstrated on 10 homework assignments; your top 8 grades on these assignments will count toward your course grade.

Examinations. Your knowledge of the bigger picture, how the various course concepts work together, will be tested on three in-class examinations. The format of the exams (largely essay) will be discussed in greater detail in class.

Grading Policy. Each assignment will contribute toward your final grade as follows:

Assignment	Approx. Weight	Total Possible Points
3 exams- 45 pts each	45%	135
Homework assignments (8 of 10 at 11 pts each)	30%	88
class presentations and handouts	15%	46
class attendance & participation	10%	31
Total		300

Course grades are determined using the following system:

93-100 A	87-89 B+	77-79 C+	67-69 D+	0-59 F
90-92 A-	83-86 B	73-76 C	63-66 D	
	80-82 B-	70-72 C-	60-62 D-	

Class Policies

- No cell phones or other electronic devices (except calculator). Please turn them off.
- Classroom citizenship (i.e., following classroom policies) during graduate courses is a big part of training and is a reflection of professional behavior. Please follow these policies. I reserve the right to ask students in violation of class policies to leave the class. Students with more than three total violations may be asked to drop the course or receive an "F".

Changes to Syllabus

The information in this syllabus is subject to change. The schedule will change according to our pace. Changes will be announced in class. You are responsible for all class announcements.

Tentative Schedule

Week	Date	Topic	Reading	Assignment
1	Aug 26	Introduction, syllabus, course overview; Basic concepts	H & F prefaces	
	Aug 28	Basic concepts	H:1; F: 1.1-1.6	
2	Sept 2	SPSS/ Graphs	H: 2.1-2.6; F: 3	
	Sept 4	Graphs	F: 4	
3	Sept 9	Average	H: 2.7, F: 1.7	HW 1 due
	Sept 11	Variability	H: 2.8-2.11	HW 2 due
4	Sept 16	Exploring assumptions	F: 5.1-5.6	
	Sept 18	Correcting problems with data	H: 2.12; F: 5.7	HW 3 due
5	Sept 23	Exam 1		
	Sept 25	Normal Distribution, Z scores, & probability	H: 3	
6	Sept 30	Sampling distributions	H: 4.1-4.5	HW 4 due
	Oct 2	Sampling distributions	H: 4.6-4.13	
7	Oct 7	Hypothesis testing	H: 7; F:2	HW 5 due
	Oct 9	t tests	F: 9	
8	Oct 14	No class-Fall Break!		
	Oct 16	t tests		HW 6 due
9	Oct 21	Catch up day/ review		
	Oct 23	Exam 2		
10	Oct 28	power	H: 8	
	Oct 30	ANOVA	H: 11	
11	Nov 4	ANOVA	F: 10	
	Nov 6	Planned comparisons & post hoc tests	H: 12	HW 7 due
12	Nov 11	No class-Veterans Day!		
	Nov 13	Correlation	H: 9.1-9.4; F: 6	
13	Nov 18	Correlation		
	Nov 20	Non-parametric approaches	F: 15	HW 8 due
14	Nov 25	Non-parametric approaches	H: 18	
	Nov 27	No class—Happy Thanksgiving!		
15	Dec 2	Categorical data (Chi square)	Gigerenzer et al	
	Dec 4	Chi-square	F 18.1-18.5	HW 9 due
16	Dec 9	Chi-square; Catch up; choosing the right statistic		HW 10 due
	Dec 11	Exam 3
