# Desktop or web?

# Clicker or mobile?

## Understanding response technology

---

Response technology is designed to ensure learner success. However, it can be difficult to sort through the many options that are available.

TurningPoint interactive polling software supports both a desktop and a web-based platform, and allows participants to respond with clickers or mobile devices. What is the right option for you? Here is some important information to consider before making that decision.

### TURNINGPOINT WEB

A web-based version of TurningPoint, this platform automatically saves results online and gives instructors the freedom to provide interactive content both inside and outside of a classroom or meeting.

#### Enhance PowerPoint presentations

Our light add-in lets instructors collect results online while enjoying the ease of our intuitive PowerPoint integration.

#### Easily poll online

Build and facilitate content online for a completely web-based experience. When polling through a TurningPoint account, questions can be asked online through a computer, tablet or even a smartphone.

#### Schedule surveys and assessments

Share interactive content at any time without the need for a live polling session. TurningPoint web is the only TurningPoint environment to support homework assignments or large-scale surveys outside of class and meeting times.

### TURNINGPOINT DESKTOP

This is where it all began. TurningPoint desktop is our flagship software that has served millions of clients over the years. As a desktop application, its primary difference from TurningPoint web is that content and results are self-contained to either a receiver or computer.

## **Deliver interactive surveys and assessments**

Easily create and ask interactive polling questions with our industry-leading PowerPoint integration.

## **Instantly poll over any application**

Poll over top of web pages, videos, documents or any application using a floating toolbar.

## **Give self-paced assessments**

Deliver assessments and evaluations that require students to work at their own pace.

TurningPoint polling software is versatile and can fit into any environment to help increase understanding, engagement and retention. Choose the platform and response option that is right for you to make every part of your presentations interactive, collaborative and memorable.

# **CHOOSE THE RIGHT RESPONSE OPTION**

Both our desktop and web platforms allow participants to use either mobile devices or clickers. All TurningPoint subscriptions automatically include mobile responding capabilities, which enable participants to quickly and easily respond to interactive questions from any location with their own smart phones, tablets or computers.

In addition, we have a variety of clicker options available. Whether you require something simple or full-featured, or a device to support the visually impaired, we have a clicker that suits your needs. Since our response options all work in harmony, you also have the option of a hybrid environment, which gives individual participants the flexibility to use either a clicker or mobile device.
