

# TurningPoint® web

## A complete web-based polling solution

Create content, conduct polls and manage results entirely online while supporting interactive learning both inside and outside the classroom. TurningPoint web also allows participants to respond in real time using clickers\*, web-enabled devices or both in the same environment.

### PowerPoint polling

Use a light add-in to enjoy our industry-leading PowerPoint integration and send results directly to the web.

### Web polling

Build and facilitate content online for a completely web-based experience.

### Scheduled surveys and assessments

Share interactive content, including homework assignments and large-scale surveys, at any time.

### Response Options

While physical clickers are not required, responses from both mobile devices and clickers are tied to each student to permit flexibility and create an environment that works for each individual instructor.

\*TurningPoint web will support clickers starting in June 2018.
