EHIM Cares Custom Me Too Closed Formulary

26711 Northwestern Highway, Suite 400 :: Southfield, MI 48033-2154 :: 800-311-3446 :: 248-948-9900 :: www.ehimrx.com

EHIM Cares Custom Formulary is a well-designed, evidenced-based formulary that optimizes patient outcomes by ensuring that patients receive the most effective and safe therapy. All medications are reviewed by EHIM Pharmacy & Therapeutics Committee for clinical efficacy, safety and cost savings for formulary consideration.

This list of medications is a guide which includes preferred medications within select therapeutic classes that demonstrate the greatest value to you and your Employer. Medications are excluded from formulary coverage if they fail to demonstrate a clinical or safety advantage over

currently available and less costly therapies. This listing is revised periodically as new medications and new prescribing information becomes available. If you are utilizing an Excluded or Non-Preferred medication, you may want to speak with your physician to determine if there is an alternative therapy that provides the same therapeutic efficacy, but is available at a lower cost to you. This document may be shared with your physician to evaluate potential preferred therapy options.

For additional benefit coverage information, please check your benefit plan documents or feel free to contact the EHIM Pharmacy Call Center at 800-311-3446.

Frequently Asked Questions About Generic Medications

What is a generic drug?

A generic drug is a lower cost version of a brand-name medication. They are just as safe and effective as the brand name, but they are more affordable.

How are generic drugs different from brand name drugs?

The biggest difference between a generic and brand name drug is the price. Most generics cost 70-90% less than the brand name version. Generic drugs may also have a different shape, color or package. But these differences only affect how the medicine looks, not how it works.

Are generics really the same as the brand name?

Yes. Generic drugs have the same medicine as the brand-name, and the FDA will not approve them unless they are just as safe and effective as the brand-name drug. There are a few special medical conditions where a generic drug might have a small difference in how it works, but that is very rare.

Do generic drugs cause more side effects than brand-name drugs?

No. Brand-name drugs and a generic drug have the same rates of side effects. Each medication can affect each person in a different way. If your medicine has side effects that you are worried about, call your doctor.

- All MULTISOURCE medications (DAW) (brand name medications that have an EXACT generic equivalent) are subject to the Non-Preferred copay (Not All MULTISOURCE medications are listed on this Formulary or may be covered)
- All forms (oral, liquid, topical...) and dosages (DR, ER, LA, XR....) of the medications listed are classified as Non-Preferred
- This formulary is subject to change at any time without notice
- Some medications may require an approved Prior Authorization before being covered
- Some medications may be applicable to a Quantity Limitation
- Not all medications on this formulary may be covered by your plan
