FIRE SAFETY REPORT

Office of Public Safety
Department of Environmental Health and Radiation Safety
Life Safety / Fire Safety
Fire Safety and Reporting
Fire Safety Tips and Information
Higher Education Opportunity Act
Fire Causation Definitions
Fire Safety Statistics and Information
Fire Safety Statistics Charts
The Office of Public Safety was established as part of the Administration Team in the spring of 2012 and consists of the four departments: Police, Health Science Security, Environmental Health and Radiation Safety and Public Safety Services. The new Office of Public Safety brings together all areas of the university with a primary mission of safety under one director. The result is a coordinated approach to making The University of Toledo a safer environment to learn, work, live and heal.

Department of Environmental Health and Radiation Safety

419.530.3600

Nearly all research activities that occur on University campuses involve hazardous and dangerous materials. Therefore training, monitoring and other safeguards need to be in place. The Mission of the Environmental Health and Radiation Safety Department is as follows:

“The mission of the Environmental Health and Radiation Safety Department is to develop, implement and monitor programs of environmental and occupational safety and health as necessary to protect the health and safety of faculty, staff, students and campus visitors, and to provide compliance with applicable regulations.”

The staff is interested in hearing your suggestions and concerns relating to the overall safety of the campus. Please use the information listed on the Contact Us page to reach a member of the staff.

The Environmental Health and Radiation Safety Department is located at The University of Toledo Medical Center (UTMC), Room 0235 on the Health Science Campus and in the Transportation Center, Suite 1150-E on the Main Campus. The Radiation Safety Office may be found in UTMC, Room 0259. The Environmental Health and Radiation Safety Department works diligently to make our campuses safer by developing, implementing and monitoring programs of environmental and occupational safety. The Environmental Health and Radiation Safety Department is also very involved in emergency planning, training exercises, and actual events. On average the University as a whole conducts well over 100 exercises or actual events in a calendar year on all of its campuses and within the Medical Center. Each event is evaluated and improved action plans are developed to better respond to emergencies in the future.
Life Safety / Fire Safety

419.530.3607

The University of Toledo Fire and Life Safety Program operates out of the Facilities Maintenance and Construction department. Within this department there are six full-time State Certified Fire and Life safety technicians that are assigned to various buildings across the campuses of the University of Toledo. The life safety technicians ensure that all fire code violations are corrected in a timely manner. They maintain all suppression systems throughout the University campus. These include: fire pumps, fire extinguishers, chemical suppression hoods, halon or inergen systems and sprinkler systems.

They also oversee the work of any outside contractors that modify or repair University fire systems. In addition, the life safety technicians maintain all the University's fire detection systems to code. These include: fire alarms, smoke detectors, pull stations, horns and strobes and also adjust the time settings campus wide for all of the University's automatic electric clocks (from daylight savings to eastern standard and back) and make any repairs to the clocks as necessary.

The Fire and Life Safety Technicians with assistance from Environmental Health and Radiation Safety staff provide review of fire protection engineering plans along with capital projects. The fire and life safety techs also perform acceptance tests of new fire protection systems to allow for occupation of new built and renovated spaces.

Code compliance consultation also is a major function of life and fire safety staff and they are constantly serving as a liaison with local, state and federal regulatory agencies. Additionally, the Fire and Life Safety Technicians are responsible for the continued operation of proprietary fire alarm monitoring stations across our campuses. The Fire Safety Inspection Program is a joint effort between the Fire and Life Safety Technicians University Police, and the Safety and Health Staff members. These inspections consist of regular inspections of existing buildings conducted with the local and state fire authorities and by UT staff members. These are in the form of routine inspections and fire watches when fire systems may be impaired.

Environmental Health and Radiation Safety staff works with the state fire marshal and industrial commission to pre-inspect tents at all home football games and special events. In addition, staff from Environmental Health and Radiation Safety attend all home games and monitor all special event location for fire and life safety.

For more information about Fire and Life Safety at the University call 419-530-3607 or visit their web site: http://www.utoledo.edu/depts/safety/Life_Fire_Safety.html.
Fire Safety and Reporting

Residence Life staff receive annual intensive training in the areas of Life Safety and Fire Safety through the Department Environmental Health and Radiation Safety. Plans are in place in advance to accommodate students with special needs. The training includes the operation of fire extinguishers. Each residence hall is equipped with a fire suppression system and four full scale fire drills are conducted annually in each residence hall. In 2012 there were nine actively operating residence halls on campus containing over 3,700 students. The average evacuation times for the residence halls was 6.25 minutes from the activation of fire alarm to the last person exiting the building.

Fire Alarm Activation: What to Do

When the fire alarm is activated, all residents and guests must immediately leave the building using the nearest stairs and exits. Do not use the elevators. Follow the directions of the residence hall staff, police, safety and health, or fire department personnel. Rooms may be checked in order to confirm evacuation of all occupants.

Anyone who intentionally activates the fire alarm system when there is no fire is subject to prosecution through the criminal court system and/or disciplinary action through the University judicial system. The expected sanction for such a violation is suspension from the University for a minimum of one semester and remuneration of costs incurred.

Anyone who tampers with fire safety equipment or removes it from its proper location, other than for proper use, is subject to disciplinary action. The minimum University sanction for a first time violation is a $50 fine and may result in termination of the resident’s housing contract.

An example of the Fire Evacuation Sheet is contained on the following page.

REPORT INTENTIONAL FIRES & FALSE FIRE ALARMS!
419-530-2600
Fire Safety and Reporting

R.A.C.E.

If you are involved in a fire, remember R.A.C.E. acronym to help you respond safely and correctly:

R = RESCUE
anyone in immediate danger from the fire, if it does not endanger your life
A = ALARM
sound the alarm by calling “2600” (on-campus locations only) and activating a pull station alarm box
C = CONFINE
the fire by closing all doors and windows
E = EXTINGUISH
the fire with a fire extinguisher, or EVACUATE the area if the fire is too large for a fire extinguisher.

Proper Use of Fire Extinguishers (P.A.S.S.)

To use fire extinguishers correctly, remember the P.A.S.S. acronym:

P = PULL
the pin on the fire extinguisher
A = AIM
the extinguisher nozzle at the base of the fire
S = SQUEEZE
or press the handle
S = SWEEP
from side to side until the fire appears to be out

Fire Extinguisher Selection

Virtually all fires are small at first and might easily be contained if the correct type of extinguisher is readily available and properly used. Use the information provided in the Fire Extinguisher Selection guide to insure that the type of extinguisher you choose is appropriate for the area and materials you are trying to protect.

The University of Toledo maintains over 6,500 individual fire extinguishers and fire suppression systems across its campuses. Click the following link for more information: Fire Extinguisher Selection.

Fire Escape Procedures

What you should and should not do when trying to escape from a fire. Familiarize yourself with the proper Fire Escape Procedures and in the event of a fire you will be prepared to respond quickly and correctly. Click the following link for more information: Fire Escape Procedures.
Fire Safety and Reporting

Student and Employee Guide to Portable Fire Extinguishers

When to Fight a Fire ...

Fight the fire only if all of the following are true:

- Everyone has left or is leaving the building
- The Fire Department or Campus Police is being called
- The fire is small and confined to the immediate area where it started (waste basket, cushion, small appliance, etc.)
- You can fight the fire with your back to a safe escape route
- Your extinguisher is rated for the type of fire you are fighting
- You know you can effectively operate a fire extinguisher

Remember ...

A portable fire extinguisher can put out a small fire or contain it until the Fire Department arrives. Portable fire extinguishers are not designed to fight a large or spreading fire. Even against small fires they are useful only under the right conditions.

- An extinguisher must be large enough for the fire at hand. It must be fully charged and in working order
- The operator must know how to use the extinguisher quickly without taking time to read the directions

When NOT to Fight a Fire ...

There are times when you should not fight a fire with a portable extinguisher:

- If the fire is spreading beyond the immediate area where it started, or is already a larger fire
- If the fire could block your escape route
- If you are unsure of how to properly operate the extinguisher
- If you are in doubt whether the extinguisher is proper for the type of fire at hand

If any one of these conditions is true, leave immediately. Close off the area and leave the fire to the Fire Department.

Protect Yourself at All Times

- Stay low to the ground and position yourself between six and eight feet away from the fire
- Avoid breathing the heated smoke and fumes or the extinguishing agent
- If the fire starts to spread or threatens your escape route, get out immediately
- Make it a point to notice the locations of the fire extinguishers in your area
- Pick up a fire extinguisher in a non-emergency situation, look at it, know its weight, and know the type of fire it will extinguish.
Fire Safety and Reporting

Portable Space Heaters and Halogen Floor Lamps

Special warnings and rules regarding the safe use of portable space heaters and the University's policy on prohibiting the use of halogen floor lamps in campus buildings are as follows. Click the following link for more information: Portable Space Heaters and Halogen Floor Lamps.

5. Hazardous Materials

Fire Safety Tips and Information

Fire statistics; emergency preparedness; survival tips; pre-planning strategies; on-campus & off-campus emergency phone numbers; and more information click the following link: Fire Safety Tips and Information.

Higher Education Opportunity Act Definitions

Cause of Fire:

The factor or factors that give rise to a fire. The causal factor may be, but is not limited to, the result of an intentional or unintentional action, mechanical failure, or act of nature (34 C.F.R. 668.49 (a)).

Fire:

Any instance of open flame or other burning in a place not intended to contain the burning or in an uncontrolled manner (34 C.F.R. 668.49 (a)).

Fire Drill:

A supervised practice of a mandatory evacuation of a building for a fire (34 C.F.R. 668.49 (a)).
Higher Education Opportunity Act Definitions

**Fire Log:**

(1) An institution that maintains on-campus student housing facilities must maintain a written, easily understood fire log that records, by the date that the fire was reported, any fire that occurred in an on-campus student housing facility. This log must include the nature, date, time, and general location of each fire. (2) An institution must make an entry or an addition to an entry to the log within two business days, as defined under §668.46(a), of the receipt of the information. (3) An institution must make the fire log for the most recent 60-day period open to public inspection during normal business hours. The institution must make any portion of the log older than 60 days available within two business days of a request for public inspection. (4) An institution must make an annual report to the campus community on the fires recorded in the fire log. This requirement may be satisfied by the annual fire safety report described in paragraph (b) of this section (34 C.F.R. 668.49 (d)).

**Fire–Related Death:**

Any instance in which a person—(1) Is killed as a result of a fire, including death resulting from a natural or accidental cause while involved in fire control, attempting rescue, or escaping from the dangers of a fire; or (2) Dies within one year of injuries sustained as a result of the fire (34 C.F.R. 668.49 (a)).

**Fire–Related Injury:**

Any instance in which a person is injured as a result of a fire, including an injury sustained from a natural or accidental cause, while involved in fire control, attempting rescue, or escaping from the dangers of the fire. The term “person” may include students, employees, visitors, firefighters, or any other individuals.

**Fire Safety System:**

Any mechanism or system related to the detection of a fire, the warning resulting from a fire, or the control of a fire. This may include sprinkler systems or other fire extinguishing systems, fire detection devices, stand-alone smoke alarms, devices that alert one to the presence of a fire, such as horns, bells, or strobe lights; smoke-control and reduction mechanisms; and fire doors and walls that reduce the spread of a fire (34 C.F.R. 668.49 (a)).

**Fire Statistics:**

(1) An institution must report statistics for each on-campus student housing facility, for the three most recent calendar years for which data are available, concerning—(i) The number of fires and the cause of each fire; (ii) The number of persons who received fire-related injuries that resulted in treatment at a medical facility, including at an on-campus health center; (iii) The number of deaths related to a fire; and (iv) The value of property damage caused by a fire. (2) An institution is required to submit a copy of the fire statistics in paragraph (c) (1) of this section to the Secretary on an annual basis (34 C.F.R. 668.49 (c)).

**Value of Property Damage:**

The estimated value of the loss of the structure and contents, in terms of the cost of replacement in like kind and quantity. This estimate should include contents damaged by fire, and related damages caused by smoke, water, and overhaul; however, it does not include indirect loss, such as business interruption (34 C.F.R. 668.49 (a)).
Fire Causation Definitions

Incendiary:
Intentional

Accidental:
Unintentional

Natural:
Act of Nature

Undetermined:
Cause undetermined after investigation

Fire Safety Statistics and Information

This chart is published annually in accordance with requirements established by the Higher Education Opportunity Act. The Statistics are listed below and can also be found archived at The University of Toledo Police Web Site: Fire Log.
