

ADDENDUM 2

RFP FY26-13 Electric Provider

Released: April 1, 2026

UToledo Electric Provider RFP

- Can they provide any information about any expectations they currently have to add buildings and/or modify the current cooling and heating equipment, as mentioned in Section 5.4.7 of the RFP?
 - a. **Delete Section 5.4.7, Paragraph 2 in its entirety. The University directs Respondents to price the load based on the historical data provided. While campus evolution is constant, no specific load-altering projects are currently slated for inclusion in this supply obligation. Any significant future load changes will be handled via the standard contract amendment process.**
- Specific to this offer: What kind of generation do they have, and how long has it been in use (account 08007343812220012024 is marked as “Generation Exists”)? Do they expect any changes going forward?
- Account number 08060867562230010764 on the request has been generated. To price, we need to know how long the generation has been in use, and what type of generation it is.
 - a. **The referenced generation is a separate solar field with its own utility interconnection. It is not 'Behind-the-Meter' (BTM) and does not offset the load for the facility accounts in this RFP. There is no planned additional BTM generation. The historical load profiles provided are current and represent the full anticipated supply obligation.**
