

Based on ABET CAC Student Learning Outcomes

1. Course Number and Name:

CSET 3600 Software Engineering and Human Interfacing

2. Credits and Contact hours:

Credits: 4 hours, Contact: 3 lecture hours, 1 lab

3. Instructor's or course coordinator's name:

Weiqing Sun

4. Text book, title, author, and year:

“Software Engineering: A Practitioner’s Approach, 8th Edition, Roger S. Pressman, 2019

a. Other supplemental materials:

As assigned by instructor

5. Specific Course Information:

a. Brief description of the content of the course (catalog description):

An introduction to software engineering processes for technology students.

Includes: user requirements, software specification, design approaches, software tools, validation, modification, maintenance, documentation, lifecycle models, and intellectual property considerations.

b. Pre-requisites, or co-requisites:

CSET 3150 or EET 3150

6. Specific goals for the course:

a. Specific outcomes of instruction:

1. Be able to explain and apply a broad range of concepts from software engineering, spanning all aspects the software engineering process.
2. Be able to recognize, define, and make correct use of generally accepted software engineering techniques and terminology.
3. Have experienced working as a member of a team on a software engineering project.
4. Have experienced applying a representative cross section of software engineering techniques.
5. Be familiar with best practices of software engineering.

b. Explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course: 3, 4, 5

3. An ability to communicate effectively in a variety of professional contexts.
4. An ability to recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles;
5. An ability to function effectively as a member or leader of a team engaged in activities.
6. An ability to identify and analyze user needs and to take them into account in the selection, creation, integration, evaluation, and administration of computing-based systems. (IT program criteria).

Brief list of topics to be covered:

1. Software design
2. Using APIs
3. Software tools and environments
4. Software processes
5. Software requirements and specifications
6. Software validation
7. Software evolution
8. Software project management
9. Risks and liabilities of computer-based systems
10. Intellectual property
11. Object Oriented Programming
