Standard Operating Procedure

Should an air handling equipment failure occur, specific procedures will be taken to ensure the safety and welfare of all building occupants and to minimize the time needed to restore normal air handling capability to the disrupted areas.

Purpose

To provide guidelines for action in the event of an interruption of the normal operation of a piece of air handling equipment which is designed to provide a controlled environment for patients, visitors, students, staff and essential equipment.

Procedure

In the event of an air handling equipment failure or malfunction, the following notification system will be implemented:

1. The Central Control Operator shall notify:
   A. During the regular working hours: 7:00 a.m. to 3:30 p.m., Monday through Friday, notify the Manager, Mechanical Maintenance, immediately.
   B. Should the failure or malfunction occur before or after regular working hours, notify the appropriate maintenance personnel on duty and inform them of the problem as it was received through the centralized building automation system.

2. The appropriate supervisor or designate, or the maintenance personnel on duty should investigate the malfunctioning or failed equipment report by making an immediate visual inspection of the equipment.

3. If the malfunction has occurred after hours, the responding maintenance personnel on duty shall report back to Central Control any unusual conditions found and the status of the malfunctioned or failed equipment.

4. The Central Control Operator on duty shall then notify the Manager of Electrical/Systems or the appropriate supervisor and report any unusual conditions, if the malfunction has occurred after hours or if the HVAC supervisory staff cannot respond to the alarm.

The Central Control Operator upon further direction from the appropriate supervisor or manager will begin the call-in procedure for additional facilities personnel in consecutive rotation, as outlined in the on-call list located within Central Control.

5. The HVAC supervisor staff will define the cause and severity of the problem and report this information directly to the University Director, Facilities Maintenance.

6. The Director Facilities Maintenance along with the responding appropriate supervisory staff, shall evaluate the severity of the problem and taken appropriate action in restoring normal air handling service back to the area(s) affected by the outage.

The main criterion for determining the cause of action will be the time table for restoration of the normal air handling service and an evaluation of the capability to maintain an acceptable amount of air exchanges.

The actual needs for equipment and actions required will have to be based on the extent of damage incurred to the air handling system.

7. The Director, Facilities Maintenance will notify the AVP, Facilities & Construction of the location of the outage or malfunction and the plan of action and the estimated time required to restore the air handler back to service.

8. The first HVAC person to arrive at the failure site should implement lockout/tag-out procedures if appropriate.

The Manager, Mechanical Maintenance, or appropriate supervisor or the designee will assess the damage and if the UT staff cannot make repairs, shall implement the following procedures:

A. If the fan has breached its housing or steel fabrication is needed; one of the following vendors should be called:
