 Undergraduate and graduate students in the Dept of Kinesiology receive hands-on training on how to decipher complex responses and adaptations that occur in skeletal muscle after exercise. An important component of their training is to learn how to analysis proteins within skeletal muscle. The requested microfiltration system affords undergraduate and graduate students the opportunity to concentrate proteins in their muscle samples and then determine if the amount of a particular protein in skeletal muscle changes after exercise. Several undergraduate and graduate student will likely use this technique in their projects.
