Impact on student learning:

Part of a school psychologist's multifactor evaluation of children suspected of having disabilities is conducting observations. Observations are essential for identifying the antecedents and consequences that are causing and reinforcing student behavior. Interval recording is frequent method for observing students behavior, which requires school psychologists pay attention to the child and a clock to measure the time interval. The GYMBOSS allows our students to set and keep track of time intervals during observations. This device allows our students to set an alarm to go off at the end of each time interval by beeping, vibrating, or both. The vibrating mode is particularly important to our students during observations because it allows observations to be conducted and intervals to be alerted quietly as not to draw attention or disturb the student and or classroom being observed.

Hi,

My name is Mat Butler. I'm a graduate assistant at the University of Toledo and my department is interested in purchasing 30 gymboss interval timers. In order to purchase these I need a formal quote for how much they will cost. Is there anyway I can get a quote? I greatly appreciate your help.

Mat
