Provide a brief description of the technology requested*: a device that wirelessly streams content from the mobile device to a TV or through a projector to a screen

The Apple HDMI to HDMI cable lets you connect an Apple TV, Mac mini, or other HDMI device to an HDTV or A/V receiver. Both high-definition digital video and multi-channel digital audio are delivered over this single cable for picture and sound.

Briefly describe how the technology will be used (function)*: The department has iPads that were purchased through the tech fee. These iPads are used in classrooms and in the field. The Apple TV will allow students to display exactly what they are doing on their mobile device to a large screen TV or, through a projector, on a screen.

Provide a rationale that Tech Fee funds are appropriate for this request*: Students will be able to display exactly what they are doing on their mobile device (demonstrate apps, display images, play educational video from the internet and more) while they are teaching. Not all classrooms are set up as "smart" classrooms. Educational technology today is moving faster than schools can afford and Apple TV will help to bridge this gap.
