**Provide a brief description of the technology requested*:**

Simucase is a website that contains various simulated patients and caregivers which are used to facilitate clinical skills in diagnostics and therapy in speech-language pathology.

**Briefly describe how the technology will be used (function)*:**

This website will be utilized to help train and prepare students to work with actual clients and caregivers as part of their clinical coursework in speech-language pathology. They will be guided by licensed clinicians and/or professors. Students are able to count hours with simulated patients toward their overall clock hours needed for clinical certification and licensure.

**Provide a rationale that Tech Fee funds are appropriate for this request*:**

This equipment provides direct hands-on training of skills required in the practice of speech-language pathology in a guided setting with simulated patients. Because it is being done with simulated patients, students can learn from errors without causing harm to live patients. It will improve student preparation and confidence prior to students working with actual patients and caregivers in internships and during their on-campus clinical placements.

*Keep in mind that the committee members come from a variety of educational backgrounds and may not be familiar with department specific language. Please use concise, common terminology so that committee members reviewing this form will be able to fully understand the request.

- If you are submitting a request for computers, printers, scanners or software, you <u>must</u> consult with College Computing and the technology staff, to acquire a quote and to make sure that this equipment/software is supported by UT and compatible with existing technology.
