**MAJOR RESEARCH INTERESTS:**

Areas of interest include finding methods to improve the diagnosis and treatment of mood disorders. Other research interests include the discovery of new medications (lamotrigine) or the novel applications of currently available medications in the management of treatment refractory mood disorders. I have conducted research and published articles on physician wellness and suicide among physicians. I have written a book entitled A Guide for Life to help patients cope with common problems and psychiatric illness. I am interested in the Biopsychosocial model and its application in clinical practice.
