Title of Clerkship: Nephrology Elective - Sandusky AHEC (4 Weeks) Elective Year(s): Fourth-Year Elective Internal Medicine Department: Clinical ✓ Non-Clinical/Research Basic Science Type of Elective: Clerkship Site: Sandusky, Ohio MEDI715 Course Number: Blocks Available: All, when preceptors are available

Number of Students/

Block:

1

Faculty:

Various Preceptors

Elective Description/ Requirements: A four-week rotation for fourth year medical students interested in Nephrology as a specialty. There is a great opportunity for dialysis observation and management, and most of the rotation relates to etiology and management of chronic renal failure.

Length of Clerkship: 4 weeks

PC-8, PC-10 Process:

- 1. Describe problems in ill-structured clinical cases.
- 2. Formulate hypothesis(es) based on problems
- 3. Test hypothesis(es) on a logical basis
- 4. Proposes therapeutic plan based on above analysis.
- 5. Re-evaluate hypothesis on basic of test results and/or response to treatment.
- 6. Search out basic science and clinical literature relevant to problem at hand.
- 7. Self-evaluate and become a self-directed learner.

PC-4 Skills:

- 1. Perform a careful analysis of urine sediment in the context of a clinical problem.
- 2. Write a concise consultation note clearly identifying the most likely diagnosis and therapeutic recommendations.

PC-2. PC-3 Behaviors/Attitudes:

- 1. Perform a considerate examination and evaluation of the patient.
- 2. Explain to the patient and family members where appropriate the nature of the patient's condition and the patient's choices including: risks, benefits, and alternatives.

MK-1, MK-2, MK-4 Cognitive Objectives:

- 1. Hyponatremia/Hypernatremia/Body Fluids
 - a. Describe the body control of sodium and water balance.
 - b. Explain the ways sodium and water balance is independent and the ways they are dependent.
 - c. Characterize from clinical information the patient's total body sodium (effective extra- cellular fluid volume) status.
 - d. Distinguish true hypotonicity form pseudohyponatremia.
 - e. Order diagnostic tests and interpret to determine pathogenesis of hyponatremia.
 - f. Prescribe fluids appropriate to clinical information.
 - g. Estimate water deficit from clinical information and prescribe fluids.
 - h. Evaluate edematous patient for pathogenesis and prescribe appropriate treatment.
- 2. Potassium Balance/Hypokalemia/Hyperkalemia
 - a. Describe body balance of potassium.
 - b. Determine a differential diagnosis for hypokalemic state. Propose diagnostic tests to confirm diagnosis and recommend treatment.

- c. Distinguish pseudohyperkalemia from hyperkalemia, describe tests required to confirm impression.
- d. Determine the differential diagnosis of hyperkalemic state, propose tests to confirm pathogenesis and prescribe treatment.
- e. Describe the emergency treatment of hyperkalemia, mechanisms of action, relative speed and efficacy.

3. Simple Acid-Base Disorders

- a. Describe buffering system of the body and explain why bicarbonate is a good buffer to maintain pH at 7.4 in vivo but a poor buffer in vitro at the pH.
- b. Describe the body balance of H+, HCO3-, and CO2 for the body and describe the generation, elimination and measurement of these substances. Explain the differences between total CO2, pCO2, HCO3-.
- c. Identify the 4 simple acid-base disturbances from clinical information.
- d. Describe compensatory mechanisms for each simple disturbance. Explain why the Henderson-Hasselbalch Equation (ionization constant) does not predict the compensation expected.
- e. List 5 causes for each simple acid-base disturbance.
- f. Explain the difference between acidemia and acidosis.
- g. Explain how perpetuating factors make it difficult for the body to homeostatically correct metabolic alkalosis in the face of volume depletion.
- h. Describe the treatment of each of the primary acid-base disturbances. Calculate the dosages of bicarbonate for metabolic acidosis.
- 4. Complex (Mixed) Acid-Base Disorders
 - a. Explain the difference between simple and complex (or mixed) acid-base disturbances.
 - b. Explain what predicted compensations.
 - c. Explain why compensation never obliterates the primary acid-base disturbances.
 - d. Identify mixed (or complex) acid-base disturbances from clinical material with the aid of confidence bands for simple disturbances.
 - e. Propose treatment for mixed acid-base disturbances based on an understanding of the pathophysiology.
- 5. Acute Renal Failure
 - a. Describe the differential diagnosis
 - b. Identify the treatment
- 6. Chronic Renal Failure
 - a. Search for reversible causes
 - b. Describe how to manage
- 7. Dietary
- 8. Dialysis options
- 9. Renal transplantation
- 10. Identify interstitial nephritis
- 11. Identify cystic diseases of the kidney
- 12. Identify hypertension
- 13. Evaluate and treat other common clinical disorders such as:
 - a. Proteinuria
 - b. Obstructive Uropathy
 - c. Urinary tract infections

PC-8, PC-10 Process:

- 8. Describe problems in ill-structured clinical cases.
- 9. Formulate Hypothesis(es) Based on Problems
- 10. Test hypothesis(es) on a logical basis
- 11. Proposes therapeutic plan based on above analysis.
- 12. Re-evaluate hypothesis on basic of test results and/or response to treatment.
- 13. Search out basic science and clinical literature relevant to problem at hand.

14. Self-evaluate and become a self-directed learner.

PC-4 Skills:

- 1. Perform a careful analysis of urine sediment in the context of a clinical problem.
- 2. Write a concise consultation note clearly identifying the most likely diagnosis and therapeutic recommendations.

PC-2, PC-3 Behaviors/Attitudes:

- 1. Perform a considerate examination and evaluation of the patient.
- 2. Explain to the patient and family members where appropriate the nature of the patient's condition and the patient's choices including: risks, benefits, and alternatives.

Professionalism: UT/COM students will meet or exceed the institutional standards for professionalism as stated

in the current Educational Program Objectives and the Educational Course Objectives for the

Sponsoring Department.

Instructional Methods: 1. Small group – clinical skills

2. Interpretation of lab data

3. Diagnostic test – use/interpretation

Independent study
 Outpatient rounds

6. Inpatient rounds

Evaluation Methods: 1. Formative review of clinical performance

2. Faculty observation and evaluation.

3. Professional assessments

4. Attendance

Prerequisites: Successful completion of required Internal Medicine Clerkship

Clerkship Director: Christopher Lynn, M.D.

Clerkship Coordinator: Dawn Jagodzinski Phone Number: 419-383-5022

Email: Dawn.jagodzinski@utoledo.edu

AHEC Office Contact: Sophie Aldrich
Phone Number: 419-359-5877

Email: SAHEC@CHSOhio.com

Special Requirements: None
