

Postdoctoral Position in Inorganic Chemistry and Catalysis

A Postdoctoral Research Associate Position is immediately available for an applied research project in the lab of Professor Mark Mason in the Department of Chemistry and Biochemistry at the University of Toledo. Applicants must have B.S. and Ph.D. degrees in chemistry and/or chemical engineering, research experience in the synthesis and characterization of inorganic materials and catalysts, and experience in the use of gas chromatography, X-ray diffraction, microscopy, and other analytical techniques. Applicants should have good written and oral communication skills and must be responsible with confidential research data and proprietary information. The successful applicant **must** be a US citizen (including naturalized).

Applicants must submit a cover letter, curriculum vitae, and a list of three references as a single pdf file to <https://utoledo.csod.com/ats/careersite/JobDetails.aspx?id=1943&site=9>. Review of applications will begin on August 3, 2020 and the successful applicant must be able to start as early as August 10, 2020. This grant funded position is for up to ten months, with the possibility of renewal depending on performance and continued funding.

The University encourages applications from minorities, women and persons with disabilities. The University is an Affirmative Action/Equal Opportunity Employer M/F/D/V.
