

# SAFE WAY TO VIEW ECLIPSE

Tape a piece of white paper to one of the smaller inside panels of the box.

Tape a piece of tin foil to the outside panel opposite the first panel.

Make a very small hole through the tin foil and box. The hole should be no bigger than the thickness of a pencil.

Stand with your back to the sun and your head inside the box facing the white paper.

Move box around until the hole is facing the sun and you will see the image of the sun on the white paper.
