

STUDENT RESOURCE I: **Defining green space**

A. Mental Mapping

1. Using the class definition and your knowledge of the area to guide you, sketch a mental map of the neighborhood around your school and circle three green spaces.
2. Next, for each green space circled, draw a line to the margin of the map and provide a one to two sentence description including its condition and use. (We will use the maps as comparison with remotely sensed images and commercial maps later.)
3. Share maps in class and discuss the three green spaces your circled.
