

Student Resource II**Mapping Parks and Community Gardens in Your Neighborhood****Exploring Your Neighborhood Virtually**

The purpose of this activity is to explore the neighborhood around your school virtually through an on-line source. We will use Google Maps to verify parks and community gardens that you knew about as well as look for others that may be present but you did not know about.

Google Earth

You can zoom in to see things closer. Your teacher will assign an area of the neighborhood to explore.

1. Identify places in your assigned area that may be parks or community gardens. Note the latitude and longitude.

| | Latitude | Longitude | Identifiers |
|---|----------|-----------|-------------|
| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |
| 5 | | | |
| 6 | | | |

2. Review the map that you drew in Resource 1 prior to using Google Maps. List the areas that matched and the ones that did not?
